## EDUCATION

---

### Holberton School Puerto Rico

San Juan, Puerto Rico

*Machine Learning - Specialization*

April 2022 - Present

- Currently studying the mathematics of ML, supervised learning, object detection, face verification and neural style transfer

*Software Engineer - Foundations*

June 2021 - March 2022

- Graduated from the 9 month program focused on the foundations of software engineering, including low and high level programming, algorithms, databases, and system engineering & networking.

## PROJECTS

---

### Enclothed APP

*An application with the goal of bridging the gap between technology and the fashion industry .*

*April 2022 - Present*

- Develop AR/VR and A.I technology by utilizing SDKs and APIs.
- Using Cross-platform development languages for maximum compatibility.

### CAM APP

*An application designed to smooth the process of approval between content managers and creators.*

*March 2022*

- Designed to work as an extension/tool with major publicity tools
- Connects with social media apps for an automated experience
- High quality, efficient communication in the content selection process
- Made by content managers, for content managers

### AirBnB Clone

*A replica of AirBnB built with Python and MySQL on a Nginx server.*

*November 2021*

- Built a command interpreter to manipulate data without a visual interface
- Implemented two options for back-end storage engines: ORM with SQL and File System with JSON
- Completed a website for the front-end, which shows both static and dynamic content
- Integrated an API that provides a communication interface between the front and back end
